

do-while loop in Kotlin

do-while loop executes statements at least once irrespective of the condition. In other words, this loop executes the statements present in its body before evaluating the condition.

Syntax of do-while loop

```
do{  
    //code to be executed when condition is true  
}while(condition)
```

Flowchart of do-while loop

Example of do-while loop

```
fun main(args: Array<String>){  
    var i = 1  
    do{  
        println(3*i)  
        i++  
    }while(i<=10)  
}
```

Output

3
6
9
12
15
18
21
24
27
30
